Wood, Stubbs & Co.'s Fall List for 1903

—OF—

High Grade Seeds, Etc.

For the Farm and Garden.

WOOD, STUBBS & CO., Seedsmen,

215-217 E. Jefferson St. (opposite Hay Market.)

LOUISVILLE, KY.

IN this, our Sixth Fall Catalogue, we have included the best and most suitable varieties of Grasses, Clover, Grains, Forage Crops and other seeds suitable for middle latitude and further South. Varieties which we do not consider of special merit are not included herein, and as we publish full description of all Grasses and Farm Seeds in our Annual Catalogue published in January, extended descriptions have been omitted here. Any one desiring our Spring Catalogue issued January 1st, 1903, can have same mailed free on request.

OUR STOCKS. We carry the largest and best collection of seeds in the Central West, and it is our aim always to supply seeds of satisfactory quality only. To this fact we attribute our large and increased trade each year, and it will always be our endeavor to continue this policy and improve our stocks constantly. We are always pleased to hear from customers in reference to any crop, and will cheerfully give such information as may be in our power on any subject pertaining to agriculture.

All orders entrusted to us will have careful attention, and be filled at the very lowest ruling market prices consistent with quality. As stated before our constant aim is to supply seeds of satisfactory quality, and **while we exercise the greatest care to have all Seeds pure and reliable, we give no warranty, express or implied, as to description, quality, productiveness, or any other matter connected with the goods we send out, and will not in any way be responsible for the crop. If the purchaser does not accept the goods on these terms, they are to be returned at once, and any money that has been paid for them will be refunded.**

PRICES. Prices given in this Catalogue are those ruling at the time it was published. We will cheerfully forward

samples and name lowest prices at any time desired. We especially ask large buyers to get our prices and samples before placing orders elsewhere.

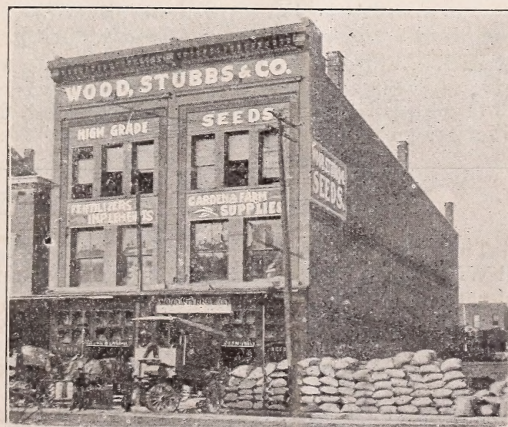

Where it is desired to sow large acreages of grass seeds, we will, if desired, suggest best varieties if a description of the land and object to be obtained are sent us, and will quote prices on such varieties separately or in mixture.

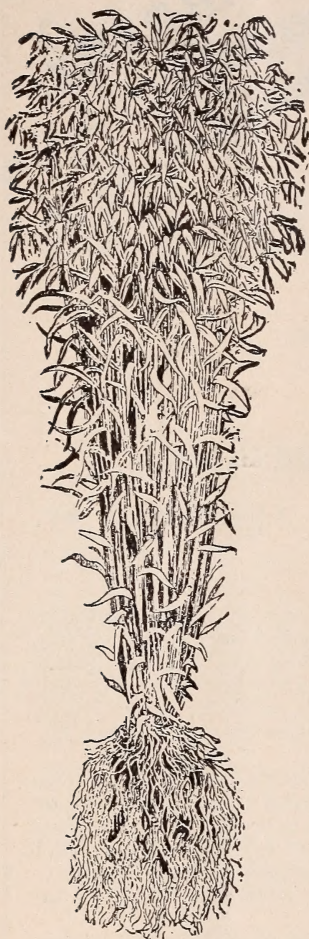

Trusting we may have a continuance of your orders, and thanking you for past favors, we are,

Very truly yours,

WOOD, STUBBS & CO.

Aug. 15, 1903.

Winter Turf Oats.

WINTER TURF OATS.

As hardy and more reliable than wheat. Not attacked with fly or rust. Afford fine pasturage during winter and spring. Yield enormously of finest grain oats, altogether the most profitable and reliable grain crop for fall seeding in this section and the South.

We have been recommending Winter Turf Oats in this locality for the past five years, and largely through our advertising they have become one of the standard crops in this section. Farmers who have grown them are universal in their praise. Sown in August or September, and in most sections as late as October, they come up quickly, afford fine pasture during winter and spring, and then yield enormous quantities of grain. This grain is far superior to any spring oat we have ever seen. The outer husk is very fine, and contains a kernel so large that a measured bushel of Winter Turf Oats weighs 40 to 42 pounds. Testimonials we have by the score. Space will not permit us to publish them, but we give below a few which are indicative of what prominent farmers think of them.

SHELBY COUNTY, KY., July 9, 1903.

The Winter Turf Oats which I bought of you, I can hardly express my satisfaction of. I sowed them the 15th of September, and grazed them very close from December until the last of July, then took the hogs off. The last of March they had grown eight to ten inches high, and on the 4th of April I turned 137 hogs on them, and changed the hogs on the 9th of May to clover, thinking the oats were gone, as the ground looked naked, but to my surprise the Oats made another start, and I cut them yesterday, and will make 25 bushels per acre. I am confident if the Oats had anything like a reasonable show at all, they would have made eighty bushels per acre.

I will send you an order for some more seed for next year. No more Rye for me if I can get Winter Turf Oats.

N. B. WAUGH.

MARION COUNTY, KY., July 14, 1903.

I sowed Winter Turf Oats last fall late in September. I pastured them continually until April. They afforded me a great deal of pasture, fully enough to pay for all their cost, and will make when harvested what I think the best crop of oats I have ever had. I am highly pleased with them, and expect to sow considerable more of them. Many of my neighbors are going to do likewise.

H. F. MILLER.

LOGAN COUNTY, KY., July 13, 1903.

I have been sowing Winter Turf Oats for fifteen years constantly, and no time have they failed to pay me better than wheat on thin land. I am very well pleased with them, and would recommend them to all my neighbors as being one of the best crops to sow. As soon as the price is fixed, please quote me with prices.

Yours very truly, J. HENRY CONN.

Nearly all of our Winter Turf Oats are grown north of the Ohio River. As we have secured them in this section, many of them being grown on contract for us, so as to make them perfectly hardy and capable of withstanding the winter in any locality of equal temperature to this. We especially warn customers against purchasing Winter Turf Oats with wild onion or considerable cheat.

FALL SEEDING. Sow broadcast or in a drill at the rate of $1\frac{1}{2}$ to 2 bushels per acre, in August, September or October. When sown early, they get well established, are as hardy as wheat, make a good growth before winter sets in, furnishing excellent grazing during the late Fall, in the Winter and early Spring.

PRICES. Winter Turf Oats like other grain are constantly fluctuating in price, and prices given here is at the time our catalogue was published. Please write us for lowest prices in large quantities. Present price, per bushel, 60c.; 10 bu. and over, 57c.; 25 bu. and over, at 55c. per bu., bags included.

Wood, Stubbs & Co's Grain Pasture Mixture.

This is a combination of the best grazing varieties of Wheat, Winter Barley, Winter Rye and Winter Turf Oats, mixed in proper proportions to give good results for Winter, Spring and early Summer pasturage.

A combination of these various grains not only produces a much larger yield and more continuous grazing, but lasts later in the season, and is better adapted to all classes of soil. We strongly recommend a trial of this mixture, believing that our customers will be thoroughly satisfied.

Price per bushel 85c.; 10 bushel and over, 80c.; bags included.

—Sow—

Winter ..Barley

For Pasture
and Grain.
Much larger
yields and more
profitable than
Wheat.

WINTER BARLEY, Choice Southern Grown.

This is a very popular crop in many sections of Kentucky, and it is free from attacks of rust or fly, and yields one-fourth to one-third bushels per acre more than Wheat. It stools out and makes fine fall and winter grazing. Is very nutritious green feed, or can be cut for hay before the grain ripens. The grain is useful for feeding all kinds of stock, or is a profitable crop for selling on the market.

In Woodford County this year, crops of Barley have been reported from 55 to 65 bushels, where wheat in the same conditions did not make fifteen.

Sow at the rate of 1 to 1½ bushels per acre, September, October or November. **Present price, per bushel 80c; 10 bu. and over, 75c.** Special prices in large quantities.

CHOICE NORTHERN SEED RYE.

This crop is largely used all over the South for winter pasturage, early green feed and for green manuring as well as for grain; can be successfully sown as early as July and as late as December. Our stock of this is extra fine. Sow 1¼ to 2 bushels per acre.

Present price, 75c per bus.; 10 bus. and over, 70c per bus., bags included. Special prices in large lots.

SAND OR WINTER VETCH.

Also called Hairy Vetch (*Vicia Villosa*.)

This is one of the most profitable, large yielding and satisfactory crops which can be grown in this section, and throughout the South. From the Ohio River to the Gulf, farmers are enthusiastic in their praises of Hairy or Sand Vetch.

It has been our endeavor for years to impress on those farmers who have not tried this crop to give it a trial. Experimental Stations have highly endorsed it, and the United States Department of Agriculture, at Washington, has issued a special bulletin on this, calling attention to its immense value as hay or forage crop, besides being a most excellent improver of the soil.

Hairy Vetch can be used very green or cured into hay, and makes one of the richest and most nutritious foods for all kinds of stock. This crop is sometimes so large that there may be difficulty in curing it, and many reports state that the crop has been so large that it has to be carried off the land to other places to cure. It sometimes makes as much as four tons of dry hay to the acre, is readily eaten by cows and other stock, increases the flow and quality of the milk, and keeps animals in fine condition. If sown early it can be grazed during the winter, but cattle should be taken off by the 15th of February, and if it is a mild winter, a very early spring grazing is judicious, for it will yield larger crops.

MEADE CO., KY., June 30, 1903.

Last fall I purchased from you some Sand or Hairy Vetch, which I sowed in my garden. The chickens grazed on this all the winter, and though April was a very dry month, the Vetch started out and grew over six feet tall, and formed such a mass of green forage, that I will have difficulty in curing it, there being such a tremendous crop on the land.

I am very much pleased with this crop, and intend to sow it much more largely in future, as I consider it one of the best leguminous crops in this section.

E. A. SMITH.

SEEDING. Sow from July to August, either broadcast or in wheat drill 12 to 15 feet apart at the rate of 40 to 50 pounds per acre. An extra quarter to a half bushel of Rye, Winter Oats or Barley, is beneficial, as it helps to hold the Vetch off the ground, and can be easier cut. Sand Vetch the last few years has been very high. This year we are able to offer it at considerably lower price, and we earnestly recommend our customers to try it.

Price, per pound, 15c; 10 lbs., 11c; 25 lbs., 10c. per lb.; 100 lbs. and over, 9c per lb. Current prices quoted on request.

Dwarf Essex Rape.

Dwarf Essex Rape.

One of the most satisfactory quick-growing crops for cattle, sheep and hogs, affording in from six to eight weeks from sowing excellent pasture, besides being a splendid soil improver. Rape has a high feeding value. It is excellent for fattening Sheep and swine, produces an abundant flow of milk in cows and is the ideal pasture for weaning lambs. Its value as a sheep pasture has been demonstrated in every State in the Union, and it is recommended by authorities everywhere as of superior value for hogs, furnishing the finest pasturage, or can be fed after cutting. Rape grows on any kind of soil and has strong growing roots which

penetrate the ground for a considerable depth. A rich, loamy soil is preferable, but does well on sandy or stiff clays, and excellent for sowing after a crop of wheat has been taken off or when corn has been worked the last time. On account of its quick growth, splendid feeding qualities, and being a fine soil improver it should be largely used in this section and throughout the South, and considering the small expense of seeding and its satisfactory yield there is no farm which should be without it.

SOWING—Rape can be sown from July to October, and can be sown either broadcast or in drills, from 4 to 6 lbs. per acre. If sown between corn after the last working, 3 to 4 lbs. is sufficient. It will afford excellent pasture six weeks after sowing, continuing until freezing weather, and in mild winters will stand until following May before going to seed.

Price. per lb., 10c.; 10 lbs., 7c.; 25 lbs., 6c.; 100 lbs., \$5.00.

Bags holding 100 lbs., 15 cts. each extra.

THOUSAND HEADED KALE.

A crop similar to Dwarf Essex Rape, but more hardy, and claimed superior in yield and quality, and for this reason is better for fall sowing.

It produces tremendous masses of cut and curved leaves, which are large, rich and beautifully deep green color. It is one of the greatest feeds for cattle which can be used to produce immense crops, and very satisfactory for grazing sheep, hogs, cattle or poultry. After being grazed it shoots out again very quickly, and continues to yield good crops throughout the season. It has been estimated in England that as much as one hundred thousand pounds of green food per acre has been produced by Thousand Headed Kale, and while we consider this considerably over estimated, it will produce such immense crops that we recommend it thoroughly to all our customers.

SEEDING. Thousand Headed Kale can be sown any time from July to September, in drills or broadcast; if broadcast sow 3 to 3½ pounds per acre, or in drills 1½ to 2 pounds per acre.

Price, Per ¼ lb., 10c.; Pound, 30c.; 10 lbs. and over, 25c.; 50 lbs., 18c. per lb.; 100 lbs., \$17.00. Bags holding 100 lbs. 15c. each extra.

BURR CLOVER.

(*Medicago Maculata.*)

A hardy annual variety of the Clover family, which has been found very valuable for winter pasturage in the South, particularly in the Gulf States.

It is highly recommended to sow on Bermuda sod, and affords excellent grazing during the winter and early spring at a time when Bermuda Grass is brown and bare; and in connection with this crop, it makes an all around year pasturage. It re-seeds itself after the first year, but the sod must be scarified each fall to give the clover seed a chance to get its roots in the soil. Burr Clover produces its seed in slender, prickly pods.

Sow over 10 to 15 pounds per acre.

Price, per pound 25c.; 10 lbs. and over 20c.

00

NOTE.

Prices on Seed Wheat given here are approximate only. Write us for special prices stating quantity, and we will mail samples.

00

SEED WHEAT.

The farmers in this section are not particularly pleased with the results of wheat in the last few years, and in many sections there has been talk of discontinuing sowing this crop. Fly and rust have much to do with the crop of wheat, as well as winter conditions, but one of the many causes for shortage of crop in this, as well as other crops, is in not selecting good stock seed. Seed Wheat carefully selected from good localities, thoroughly cleaned to remove the imperfect grains and foul matter, will have a more healthy growth, is more capable of withstanding the attacks and ravages of insects and other pests, consequently will yield much better results. Then a change of climate and soil is always beneficial. An investment of 10c. to 15c per bushel more for selected seed wheat is economy.

Our Special Seed Wheat. Most of our wheats are grown in Indiana and Ohio, and are particularly suited for this section as well as further South. We use the utmost care in the selection of the varieties of all stocks, and are thoroughly re-cleaned in our power mills before shipping, and we state unhesitatingly that we send out the best re-cleaned Seed Wheat that is supplied anywhere in this section.

It will be noticed that we do not ask fabulous prices for Seed Wheat, we depend upon our profits selling large quantities, and there is no use paying \$1.50 to \$2.00 for Seed Wheat, when good selected seed stocks can be purchased from us at very much lower figures.

The varieties given here are the most popular in this section. They have been selected from those crops producing the largest yield, and with a view of purity. **Prices given include new striped grain bags, and are delivered free in depots here.** We will take pleasure in quoting prices freight paid to your station if desired.

Fly Proof Anti-Rust. We have sold this variety in this section for the last two or three years, and it has given thorough satisfaction.

Some customers report that it is not altogether Fly Proof, and occasionally it is attacked by rust, but all state that it is one of the best hard bearded, large yielding varieties of wheat they have ever grown. The heads are well filled, with extra long fine berried grain, which is one of the finest milling wheats that can be used.

PRICES: We offer Fly-Proof Anti-Rust Wheat grown in the North for us by the originator, thoroughly re-cleaned at the following prices, bags included.

Per Bush. **\$1.40**; 5 bush. **\$1.35** per bush.; 10 bush. **\$1.30** per bush.; 50 bush. **\$1.25** per bush.

Gold Coin. This is a new variety of White Wheat which has been sown in many sections of this State with most excellent results. As a rule White Wheat is not used much in Kentucky, but this has proven of such superior merit, that it is very popular wherever established. The grain is pure white, fine quality, the heads are full, stands up well, and an extremely hardy variety. In several sections where Gold Coin Wheat was grown this year, it produced the largest crops in the neighborhood, and though it was a bad season on wheat, it has given good satisfaction.

Price—\$1.35 per bushel; 10 bu. and over, **\$1.25**. Bags included. Special prices in large lots.

Harvest King. One of the most popular wheats wherever grown on account of its early maturing, and fine milling quality grain. Large heads remarkable long, well filled, medium size grain, and the wheat withstands bad weather remarkably well. One of the particular merits of this wheat lies in the fact that it does well on most any class of soil, producing uniformly good yield wherever sown. It is very largely grown and well liked. Our stock of this is from the northern part of state, and we think it will give satisfactory results.

Price, \$1.20 per bu.; 5 bus. **\$1.15** per bu.; 10 bus. per bu., **\$1.10** bags included. Special prices on large lots.

Fultz Mediterranean. A variety of recent introduction which has been very satisfactory wherever sown. It is a cross between the Fultz and the old Mediterranean varieties, and while there is a decided improvement over the yield of either of these two, the fine milling quality of the Mediterranean has been retained by the offspring. Fultz Mediterranean is a smooth head variety rather oblong shape, very hard and an immense yielder. Last year this wheat sold at high prices. We have a limited stock which we offer as long as unsold at reasonable prices.

Price per bushel, **\$1.25**; 5 bus., at **\$1.20**; 10 bus. at **\$1.15**, bags included.

Fultz. This standard variety has been grown by the farmers of this section so long, and the fact that it has maintained its popularity in the face of a constant stream of new and valuable introductions is proof positive of its merit. It is without doubt first choice of more farmers than any other variety. Its type is too familiar to need a detailed description. The heads are very uniform in length, well filled and it can always be relied upon to produce a fair crop and in favorable season the yield is always proportionally increased.

Often it is the case that this variety has been grown so continuously in one neighborhood that its vitality has become impaired, or in common parlance "has run out." When this is the case fresh stock should always be procured.

Price \$1.20 per bu.; 5 bus. at **\$1.15** per bu.; 10 bus. at **\$1.10** per bu. Special prices in large lots.

Fulcaster. This very popular bearded variety, as its name indicates, is a cross of Fultz and Lancaster varieties. It is one of the most reliable, both as regards yield and quality. Heads of good length. Very large and producing flour of finest quality. Straw stiff and has great power to resist rust which makes it especially valuable in river bottoms and localities liable to be attacked by rust.

Price \$1.25 per bu.; 5 bus. at **\$1.20** per bu.; 10 bus. at **\$1.10** per bu. bags included. Special prices in large lots.

We will have other stocks of Seed Wheat such as **Rudy, Poole, Ky. Wonder** and other improved sorts. Send for prices and descriptions.

Wood, Stubbs & Co's Reliable Grass & Clover Seeds

Tall Oat Grass.

HUNGARIAN, OR AWNLESS BROME GRASS.

A splendid grass for both hay and pasture, especially where the soils are rather poor or dry. It is also most excellent for mixing with other grasses.

CRIMSON CLOVER.

(Also known as Annual or German Clover.)

The King of Soil Improvers. Also Furnishes Excellent Grazing, Splendid Early Green Feed, or a Good Hay Crop.

The use of this crop is rapidly extending all through the South. In adding to its value for feeding purposes, the fact that it prevents winter leaching of the soil, improving the condition and productiveness of lands wherever sown, is causing it to grow in favor. Is undoubtedly the cheapest and at the same time one of the best soil improvers that can be used, also making fine winter and spring grazing, splendid early green feed, or a good hay crop. Sow at the rate of fifteen to twenty pounds per acre in August, September or October.

Price (new crop seed), per lb., 10c.; 10 lbs. at 8c. per lb.; bu. 60 lbs., \$3.50; 5 bus. and over, at \$3.35. per bushel. Bags holding $2\frac{1}{2}$ bushels, 15c. each, extra.

HINTS ON SOWING GRASSES.

Prepare the ground thoroughly, and have the top soil in the finest mechanical condition. We strongly recommend that the grass be sown alone, and not with a grain crop, as a better stand is attained and more profitable results.

The best time for sowing in the fall is in September or October. If in the spring, February, March or April. Covering should be done with a roller or light harrow. Do not sow too little seeds to the acre, and always use the best quality that can be obtained.

Grass Seeds of Special Mention.

The three varieties following should be used extensively and we strongly recommend at least a trial by every farmer interested in this crop. Prices will be found on the following page.

TALL OAT GRASS.

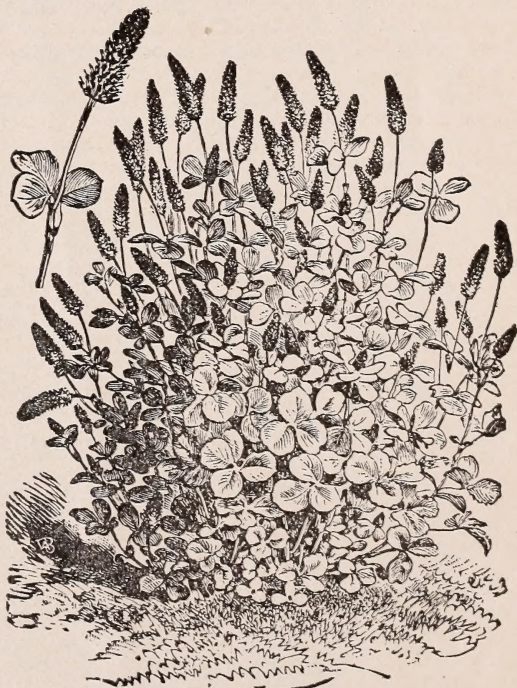

A splendid grass, well adapted for good loamy upland soils, and will give most excellent results on all upland soils in this section and further South. It ripens a little earlier than Orchard Grass, and is excellent for sowing with this and Red Clover.

A combination of 4 pounds clean Red Top, $\frac{3}{4}$ bushel Tall Oat Grass, $\frac{3}{4}$ bushel Orchard Grass, and 5 pounds of Red Clover will yield splendid returns of both pasture and hay.

ENGLISH BLUE GRASS.

A valuable hay and pasture grass for moist and wet land, yielding very large crops of nutritious hay, and most excellent for grazing.

We highly recommend this with Timothy and Red Top.

Crimson Clover.

...GENERAL LIST OF...

Wood, Stubbs & Co's GRASS & CLOVER SEEDS.

Fuller descriptions of varieties are given in our Spring catalogue issued last January. If you desire a copy it will be mailed free on request.

MARKET CHANGES. Grass and Clover Seeds are constantly changing, and the prices given here are those ruling at the time this Catalogue was published. All orders will be filled at lowest price when they are received, or we will take pleasure in quoting special prices at any time.

GENERAL LIST OF GRASS AND CLOVER SEEDS.

Mixtures for various soils on the succeeding page.

Bags holding 2½ bush. for Clover, Timothy and Fancy Red Top Seeds, 15c. each extra.

WOOD, STUBBS & CO'S

Grass and Clover Seed Mixtures.

For Hay and Permanent Pastures on Various Soils.

In making these mixtures we have selected varieties which are suitable for sowing together, and they are combined in proper proportions to afford the very best results both for hay and pasturage. Land sown with grasses in mixtures produces more plants to the square foot than if sown in any one variety, thus covering the surface better and preventing moisture from evaporating so rapidly which preserves the life of the grass field. Also the yield of hay is very largely increased, the aftermath is much better affording very much better pasturage. In all of our grass seed mixtures we use the very best seed only, the quality and purity of the seed being our first consideration. The quantity handled enables us to give our customers a very low price, even lower than if they purchased the seed separately.

MIXTURE No. 1—For Light, Sandy or Loamy Soils.

Creeping Bent Grass,	Orchard Grass,	Fancy Red Top,
White Clover,	Tall Oat Grass,	Hungarian Brome,
Sheep Fescue,	Red Clover.	

Sow 20 pounds per acre.

Per lb., 15c; 20 lbs., \$2.50; 100 lbs. and over, at 12c per lb.

MIXTURE No. 2—For Limestone, Stiff or Loamy Upland Soils.

Orchard Grass,	Ky. Blue Grass,	Perennial Rye,
Tall Oat Grass,	Red Top Fancy,	Red Clover.

Sow 25 pounds per acre.

Per lb., 15c; 25 lbs., \$3.25; 100 lbs. and over, at 12c per lb.

MIXTURE No. 3—For Heavy Loam or Clay or Bottom Lands.

Timothy,	Red Top Fancy,	Mammoth Clover,
Rough Stalked Meadow,	Alsike Clover,	English Blue.

Sow 18 pounds per acre.

Per lb., 18c; 15 lbs., \$2.50; 100 lbs. and over, at 12c per lb.

MIXTURE No. 4—For Wet Bottom Lands Subject to Overflow.

English Blue,	Red Top,	Mammoth Clover,
Italian Rye,	Rough Stalked Meadow.	

Sow 25 pounds per acre.

Per lb. 15c; 25 lbs., \$3.00; 100 lbs. and over, at 11c per lb.

MIXTURE No. 5—Especially for the South on any good soil withstanding hot dry weather.

Bermuda Grass,	Fancy Red Top,	Perennial Rye,
Tall Oat Grass.		

Sow 15 pounds per acre.

Per lb., 25c; 15 lbs. \$3.00; 100 lbs. at 18c per lb.

ALFALFA or LUCERN. (*Medicago Sativa*.)

This crop is now becoming widely known throughout all sections of the country. For this section we think Spring seeding is the best, but in the latitude of southern Tennessee or below, it can be profitably sown in the Fall.

We have a special circular on Alfalfa, and if customers are interested, request that they kindly write for same.

SEEDING. Sow 20 to 25 pounds per acre in August or September, broadcast in clean soil, which has been previously cultivated in corn or cotton to rid it of the weed. Top soil should be deep, or a sand or gravelly subsoil is excellent.

Price, New Crop Seed, per pound, 20c.; 10 lbs., 15c.; per lb., bushel (60 lbs.) **\$8.00.** Special prices in large lots.

Abridged List Vegetable Seeds for Fall Sowing.

Descriptions will be found in our Spring Catalogue which will be mailed free on request. **Postage Free** on packets, ounces and $\frac{1}{4}$ lbs. Add at the rate of 8 cts. per lb. in larger quantities if to be sent by mail

Cabbage. For Fall and Winter Sowing.

ACME BRAND FERTILIZERS

**Largely Increase Crops. Permanent Soil Improvers. Endorsed
by the Leading Growers Wherever Used.**

ACME BRAND FERTILIZERS are prepared carefully from years of practical experience with fertilizers for various crops and are not mere stimulants, but will be found permanent improvers to the soil. The various brands have been used extensively by large growers in various sections on diversified crops and tested with other brands. That they have proven superior, we think, is shown by the many flattering reports we have received. Space will not permit us to publish any of the many testimonials we have received about the superiority of Acme Brand Fertilizers, though we will send them on request.

A Vest Pocket Memorandum Book Free.

Containing analysis of Acme Brand Fertilizer and 42 Ruled Pages for Memoranda, free.

The prices given below are Net Cash and F. O. B. Louisville. Special prices quoted delivered at any depot. Send us estimated quantities.

ACME BRAND POTATO AND TOBACCO FERTILIZER.

Per bag (100 lbs.), \$1.50. Per ton, \$28.00.

GUARANTEED ANALYSIS.

Ammonia.....	3 to 4 per cent.
Phosphoric Acid, Available.....	8 " 10 "
Potash (actual).....	6 " 7 "

(Potash in this brand all from high grade sulphate.)

Especially prepared for Irish and Sweet Potatoes, Tobacco and other crops requiring a good percentage of potash. On Irish Potatoes it will make large crops of smooth, good keeping and cooking quality potatoes. Use 800 or 1,000 pounds broadcast or 500 pounds per acre in drills. If used with stable manure, broadcast the manure, and use 400 pounds of fertilizer in the row. For Sweet Potatoes 200 to 400 pounds per acre will give good results, producing a large quantity of smooth, good keeping roots.

On Beets, Radishes, Salsify, Parsnips, Carrots, Strawberries, and all small fruits use 400 to 600 pounds per acre, mixing with the soil. For Tobacco 200 to 300 pounds an acre.

ACME BRAND SOLUBLE BONE AND POTASH FERTILIZER.

Per bag (100 lbs.), \$1.00. Per ton, \$18.00.

GUARANTEED ANALYSIS.

Phosphoric Acid, available.....	10 to 12 per cent
Potash (actual).....	2 " 3 "

This brand is recommended especially as a top dressing for grass fields and to use in connection with green crops plowed in, such as clover, cow-peas, etc. It also gives splendid results on land containing plenty of vegetable matter. At the low price of which it is sold it will be found a very cheap form of obtaining plant food.

ACME BRAND PURE RAW BONE MEAL.

Per bag (100 lbs.), \$1.50. Per ton, \$28.00.

GUARANTEED ANALYSIS.

Ammonia.....	4 to 5 per cent.
Phosphoric Acid, available.....	22 " 25 "
Equal to Bone Phosphate.....	48 " 52 "

This is the finest Pure Raw Bone Meal made especially for us by one of the largest packing houses in the country of pure untreated green bone. It is in fine mechanical condition, and equal to any bone offered anywhere. Use 300 to 400 pounds broadcast.

ACME BRAND HIGH GRADE VEGETABLE FERTILIZER.

Per bag (100 lbs.), \$1.60. Per ton, \$30.00.

GUARANTEED ANALYSIS.

Ammonia.....	4 to 5 per cent.
Phosphoric Acid, available.....	10 " 12 "
Potash (actual).....	4 " 5 "

This fertilizer is especially prepared and recommended for all vegetable crops. It gives most excellent result on Cabbage, Lettuce, Onions and all crops requiring a large percentage of ammonia and Potash. Use 300 to 400 pounds per acre in hills or drills, or 600 to 800 pounds per acre broadcast, mixing it a little with the soil. It is a good substitute for stable manure or can be used in connection with it.

ACME BRAND B. B. P. BLOOD, BONE AND POTASH FERTILIZER.

Per bag (100 lbs.), \$1 25. Per ton, \$24.00.

GUARANTEED ANALYSIS.

Ammonia.....	2 to 3 per cent
Phosphoric Acid, available.....	10 " 12 "
Potash (actual).....	2 " 3 "

A good fertilizer for general use, either on farm or garden crops, and can be used with or without manure. It will give excellent results on Peas, Beans, Melons, Cucumbers, Tomatoes, early Roasting ears and Sugar Corn. Use 200 to 400 pounds per acre in hills or drills. For Millet and quick growing fodder crops, use 300 to 400 pounds per acre broadcast.

ACME BRAND WHEAT AND CORN FERTILIZER.

Per bag (100 lbs.), \$1.15. Per ton, \$22.00.

GUARANTEED ANALYSIS.

Ammonia.....	1 to 2 per cent.
Phosphoric Acid, available.....	10 " 12 "
Potash (actual).....	2 " 3 "

This fertilizer not only largely increases the yield of Corn, Wheat, Oats and other grain crops, but gives splendid after results on grass and clover. It is of permanent improvement to soil and leaves the land in better condition for any other crop that may follow the grain crop. Use 200 to 400 pounds per acre in hills or drills, and when broadcasted use 400 to 500 pounds per acre, harrowed in. For corn, if applied in the hills, use one handful to two or three hills, scattering it somewhat so as not to let the seed come in direct contact with the fertilizer.
